

Sureways Trucking Company

Quote Form Fix + Website Deployment Guide

Purpose

This package rebuilds the homepage quote form and adds a working Cloudflare Worker backend at /quote. The form submits to /quote and expects a JSON response, so the Worker must handle both GET and POST requests.

Files Included

File	Purpose
index.html	Updated homepage with fixed quote form and better error handling.
worker/worker.js	Cloudflare Worker backend that handles GET and POST /quote.
wrangler.toml	Worker deployment config.
sitemap.xml / robots.txt	SEO indexing files.
seo-pages/	Location SEO pages for Google ranking.
ads/google_ads_campaign.csv	Starter Google Ads campaign file.

Step 1 - Replace Website File

Upload the new index.html to GitHub or your active Cloudflare Pages/site deployment.

Step 2 - Replace Worker Code

Go to Cloudflare -> Workers & Pages -> site -> Edit Code. Replace the existing Worker code with worker/worker.js. Save and deploy.

Step 3 - Add SendGrid Secret

Add this in Cloudflare Worker variables. Never put the key into GitHub or HTML.

```
SENDGRID_API_KEY = your_new_sendgrid_key
```

Step 4 - Confirm Routes

Your routes should include:

```
surewaystruckingcompany.com/* surewaystruckingcompany.com/quote
```

Step 5 - Test

Open <https://surewaystruckingcompany.com/quote>. Expected JSON response:

```
{"success":true,"message":"Sureways quote endpoint is live. Submit the website form to send a quote request."}
```

Step 6 - Submit Quote Form

Submit a test quote from the homepage. You should receive an email at sales@surewaystruckingcompany.com and the customer should receive an auto-reply.

DNS Note

Keep Microsoft 365 records DNS only: MX, autodiscover, SPF, DKIM, and DMARC. Website records may be proxied through Cloudflare.
